

# Working with the Human Genome Sequence

9-12 March 2010

Instituto de Higiene, Montevideo,  
Uruguay

This 4-day workshop is being held as a pre-meeting event to the ISCB Latin America 2010 conference, Montevideo. The programme provides an intensive introduction to bioinformatics tools freely available on the Internet, focusing primarily on the Human Genome data. Students will receive hands-on training in the use of public databases and Web-based sequence analysis tools.

Topics will include:

- sequence formats and retrieval
- genome browsing
- de novo analysis of sequence
- exploring function and disease
- sequence variation
- comparative sequence analysis.

The application deadline is **4 January 2010**. Full details at:
